

Sizwe IT Group's Four Business Units

Offerings

The Sizwe Finance Option

Managing Technology Based Asset Risk

The continuous changing technological environments, converge technologies and the increasing business requirements towards information availability, create financial demands in terms of the acquisition process and supply chain management. Outright purchases may require a substantial outlay of valuable capital reserves which could be selectively utilized for non-changing assets that appreciate the balance sheet. Standard finance lease and asset purchase facilities are recorded in the balance sheet as financial debt, which may unnecessarily affect existing credit facility limits that may be optimally utilized for business growth or investment purposes.

The Sizwe Rental Solution, on the other hand, can be positioned as an operating expense, allowing predicted operating payments. We offer the Sizwe Rental Solution to our clients' benefit without the inherent costs and risks associated with ownership. As opposed to credit providers who are primarily concerned with the assessment and management of a client's credit risk, the Sizwe Rental Solution is a true rental service with the core competency of managing technology-based offering asset risk through the full rental with Sizwe.

"Outright purchases may require a substantial outlay of valuable capital reserves which could be selectively utilized for non-changing assets that appreciate the balance sheet"

Advantages of the Sizwe Finance Option

The risk of technology obsolescence is minimized and/or eliminated

The cost of ownership and disposal is avoided

Regular, fixed payments for all assets are made

Your assets are billed off balance sheet as an operating expense

Your contract details are available 24 hours a day via the internet

Cost centres can be billed separately for "pay for use"

At the end of the agreement, you have an option of returning the item to us, replacing it, or extending the agreement further

Easy upgrade options are available to add additional equipment to the contract (as a schedule to the Master Rental Agreement)

Single accountability includes the hardware, associated software and services (OEM support fees and service execution)
